

Daan Tech is a French industrial company which designs, manufactures, and sells innovative and eco-compact home appliances to answer the challenges of the 21st century.

Since Daan Tech has been incorporated in 2016 it gathered a deep know-how about eco-design, mechanical design, plastic injection, electronics and software development within its 2,500sqm factory located in Vendée, Western France.

Our first product is Bob, an eco-friendly and autonomous dishwasher, followed by Joe, an innovative cooking appliance.

Our mission is to make the home appliances industry more sustainable with eco-friendly and easily repairable products.

This is the *Sustainable Consumption Pledge* which Daan Tech makes together with the European Commission:

*By 2025, we commit to calculate the greenhouse gases (ghg) (in CO2 equivalents) emitted per year across scope 1, 2 and 3 emissions, and to reduce these by 2030. The methodology chosen will be third party verified. This commitment will be made at organisational level, so for our whole company.*

*By 2025, we commit to increase the number of regular circular activities with a full offer of refurbishment options in order to extend our products lifetime. In 2023, we refurbished 200 products. We want to reach 1000 units per year by the end of 2025.*

*By 2025, we commit to instruct the customers better with online tutorials and videos to improve the reparability of our products. We already have the best index reparability for dishwashers with 9,3/10 and 70% of our customers repair Bob themselves. Nowadays, our tutorials are private videos. We want to create a public website with all the videos online and free, and spare parts sold at the right prices in order to increase from 70% to 90% the percentage of customers repairing their Bob themselves.*

*By the end of 2024, we will publish an annual report about our company's sustainability commitments, with data and analysis about our improvements.*
